TO FSJ (General)

Focal Spot Measurement

The TO FSJ (gen) test object is designed for use with general radiography x-ray systems. This test object (when used with an appropriate test pattern) allows the medical physicist or radiographer to measure the focal spot of their x-ray system.

TO FSJ (gen) features the following test details:

- 30cm tower
- Quick central alignment check
- Can be used with line pair test pattern (**type 41-010**) or star test pattern (**type 9/20-005**)

TO FSJ (gen) is supplied in a protective carry case.
